

## Hemofreeze by MedHemScience - February 2019 update

Dear Hemofreeze customer

It is time to update you on our effort to make Hemofreeze cryopreservation bags available again. Since November 2018 MedHemScience manufactures the full range of Hemofreeze products. The accessories are manufactured via third parties.

Between May 2018 and October 2018, the MedHemScience team, with years of experience in manufacturing, quality assurance, development and marketing of Hemofreeze, took over the product from Fresenius. We acquired CE mark registration and ISO 13485 certification for the manufacturing site.

In October 2018 MedHemScience presented itself at EATB in Lille, France. Since then, Hemofreeze is back on the market and welcomed by customers in Austria, France, Hungary, Netherlands, Spain and United Kingdom who were pleased to be able to continue the use of Hemofreeze.

MedHemScience has chosen Hemofreeze as its core product and is therefore not only focused to deliver well-known and proven Hemofreeze products. The MedHemScience team is keen to explore with you how Hemofreeze fits in your actual processes and also your ideas about modifications wanted/needed for the coming future.

We look forward to your response and suggestions.

Kind regards

Hendrik van Gent and Matthias Ras
